Fellowship Project Suggestions

During the course of a fellowship, participants will complete an individual project. Drawing from resources delivered each session, as well as from the collaboration and feedback of other fellows, participants will advance their projects and share them at the end of the fellowship. Projects should be relevant to the individual's teaching interest but also be instructive to others when presented at GTF or the home campus. Some possible approaches to the project are outlined below.

In the proposal you include with your fellowship application, identify the type of project you will undertake and your motivations for doing so. What benefits do you foresee to your teaching and to your students' learning? Additionally, how might this work have broader impact when shared with colleagues at your institution and beyond? At this time, we are interested in your current interests; you may choose to modify your idea after beginning the fellowship.

Course Redesign
Using an existing course as a starting point, complete a redesign that is focused on a particular aspect of the course (e.g. integrated assessment, enhanced feedback, use of technology, experiential elements, etc.). Describe your motivation for the redesign.

New Course
Describe a course that you would like to develop and deliver.   What is the motivation for the course? What do you need to know in order to successfully design it (e.g. content, pedagogy, student needs or interests, etc.)?

Campus Initiative
You may be involved in a campus-wide initiative that impacts teaching and learning. Describe a project that might better prepare you (and others) for participation or might deepen your knowledge of the particular pedagogical feature of the initiative.

SoTL Study
Describe a project that would form the basis of a SoTL study. Describe how the fellowship might help you define the questions and methods for a new study or to advance a study that you may already have in mind.

Other
The suggestions above are not a comprehensive list. Describe a project idea that is distinct from those described above, and explain your interest in beginning or advancing the project during the fellowship.
